ENTRYWAY FOAM SANITIZER

The “**ENTRYWAY FOAM SANITIZER**” is an aid to the food processing environment which assists with minimizing the spread of environmental organisms through cross-contamination of employee’s, equipment and supplies.

- ▶ It works on the basis of applying a foamed sanitizing solution near the entrance to doorways where traffic can have an impact on the spread of microorganisms.
- ▶ Sanitizing solution assists with the reduction of microbiological growth on the floors, footwear and equipment traveling through the foam.
- ▶ Can be applied by activating a smart timed relay, photo eyes, or by mechanical activation. Smart timed relays allow the system to be shut off and activated based on the amount of traffic through the areas.
- ▶ Several types of sanitizers can be used with the **ENTRYWAY FOAM SANITIZER**. Such as quaternaries, peracetic acid, chlorine dioxide, acid sanitizers and others.

Entryway Foam Sanitizers
